

*Triglochin maritima* L., in spite of its usually maritime habitat, is frequent on wet shores and in mossy swamps of northern and north-central Maine and it also occurs in swamps of interior New York. In Aroostook County, Maine, it is associated in Larch and Arbor Vitae Swamps with *Cypripedium hirsutum* Mill, *Valeriana uliginosa* (T. & G.) Rydb., &c., and it may be looked for in similar situations in northern New Hampshire and Vermont.

*T. palustris* L. is also of wide distribution in Maine. It is a common plant of limy or slightly brackish wet places in the northern section of the state as well as in northern New Brunswick and Quebec; and it follows the coast, in brackish marshes, to Wells, near the New Hampshire border. The species may be confidently sought on the coast of New Hampshire as well as in marly bogs of northern New Hampshire and Vermont.

GRAY HERBARIUM.

MEETING OF THE JOSSELYN BOTANICAL SOCIETY.—The fourteenth annual meeting of the Josselyn Botanical Society of Maine was held at Manset, Mt. Desert Island, Maine, from August 4th to 6th. About a dozen members and guests were present. Unfortunately the weather did not prove as favorable as was hoped, but in other respects the meeting was very successful. Excursions were made to Great Cranberry Island, Bass Harbor, the Sea Wall, Sargent Mountain, Flying Mountain, and Robinson Mountain. The Mt. Desert region is as well studied as any area of similar size in the state, hence it was not expected that any real additions to the local list would be made, save such species as may have been described since the publication of the Flora of Mt. Desert. In this, however, the Society was most agreeably disappointed, and the following species are believed to represent real additions to the flora of the island. I am indebted to Mr. Ora W. Knight for the determination of the Carices.

*Carex Bebbii* Olney.

“ *lurida* Wahl., var. *gracilis* Bailey.

“ *scoparia* Schkuhr, var. *condensa* Fernald.

“ *vesicaria* L., var. *monile* Fernald.

*Vicia tetrasperma* L.

*Echinospermum Lappula* Lehm.

*Campanula uliginosa* Rydb.

A list of the plants seen or collected during the meeting, containing stations for the rarer species, will soon be issued as Bulletin 2 of the Society.—EDWARD B. CHAMBERLAIN, Cumberland Center, Maine.

*Vol. 10, No. 117, including pages 133 to 148 was issued 10 September, 1908.*
